

MCP Oz Pty Ltd

Mining Construction Paste

About us

Established in April 2023, MCP Oz, provides expertise to install underground infrastructure both safely and professionally. Through our "Can do" attitude, we focus on delivering a service whereby we compliment the mining operations to ensure construction work priorities co-exist with mining priorities.

The company is strategically based in Kambalda WA, whereby we can mobilise to site efficiently. MCP Oz considers our employees as it's greatest assets and as such we provide career progression through mentoring and training programs within the crew. Our directors have extensive experience in the mining industry.

Mission Statement

To become an innovative mining construction business known for safety, quality and professionalism. Our intention is to conduct construction works with minimal disruption to mining activities.

Our Relationship

MCP Oz has an extensive relationship with **Pryce Mining Services** which is a mining & electrical contractor. Through this relationship we can facilitate the supply and installation of electrical infrastructure such as electrical enclosures (distribution boards, pump starters, fan starters etc), substations and transformers. This allows MCP Oz a wider range of mining construction- based services to our clients.
